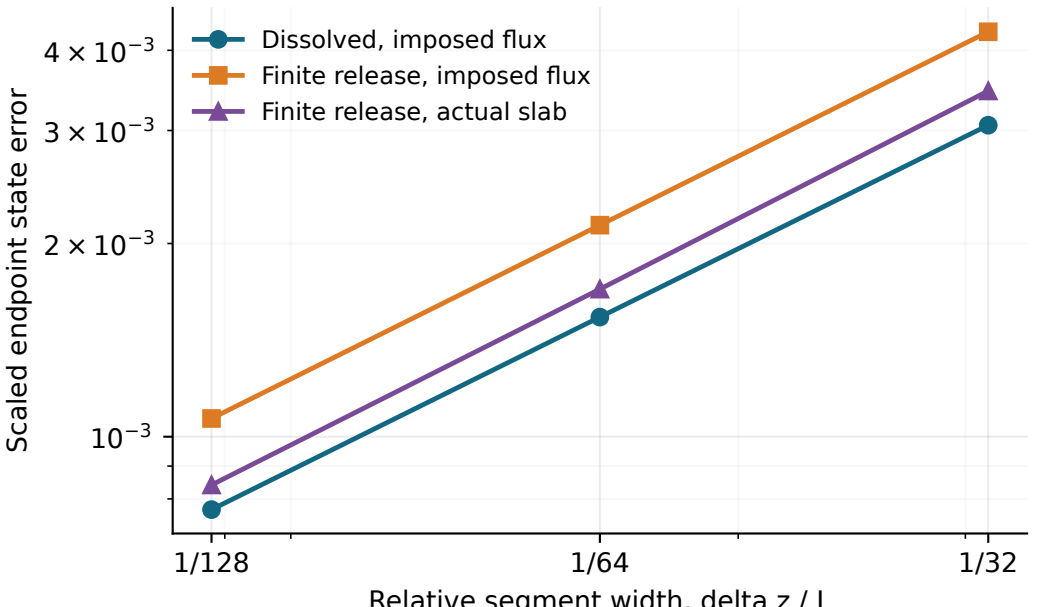
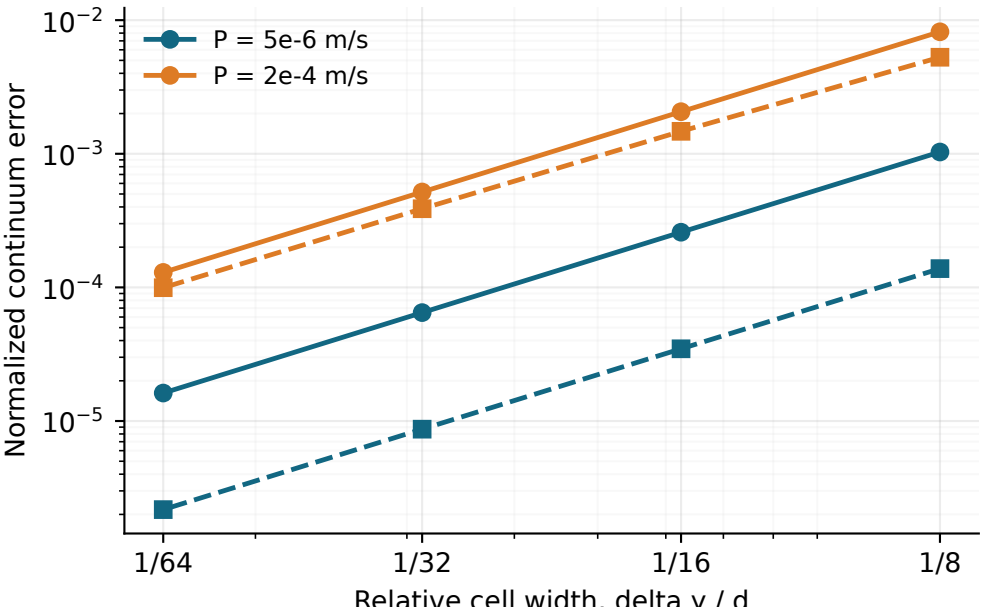
AB-LA1: verification of production transport stepping

Saved results only | 47 positive attempts accepted | 4 deliberate faults detected

Axial stepping: approximately first order



Actual radial slab: approximately second order



Axial: max(|c - exact| / c_in, |b - exact| / max(c_in, gamma c_in)).
Actual-slab axial reference uses its separately checked discrete conductance G_n.

Radial solid: |G_n / G_continuum - 1|.
Radial dashed: max cell-centre |c - c_continuum| / c_in.

Hypothetical linear verification only. Imposed-flux arrays are not tissue fields. Local checks; no biological validation.
